OnSite Media partners with Showcase Technology and to deploy concierge applications to over 20,000 hotel locations

LAS VEGAS – OnSite Media and Showcase Technology announced that they are offering a custom version of its OnSite Concierge and Netstop applications to more than 20,000 hotels and other hospitality facilities worldwide.

OnSite Concierge is quickly becoming a valuable resource for the travel industry, especially to hotels and airports across the country, providing continuous concierge services and amenities for travelers and guests via interactive kiosks, helping maintain a high level of customer satisfaction. The kiosks include a 24-hour digital concierge, featuring offers, discounts and incentives from advertisers, which range from hundreds of the world's leading brands to locally owned restaurants and retailers.

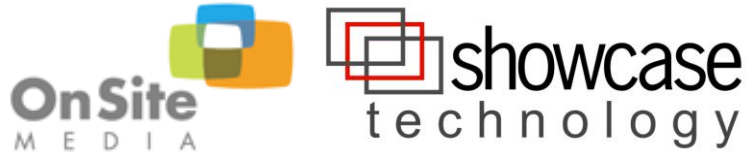

Kiosk Logix NetStop™, recently acquired by Showcase Technology, is the leading kiosk software system for securing computer systems in business centers, hotel lobby's and other public locations. Known for its high level of security and reliability, NetStop™ software is used in more than 23,000 locations in over 60 countries.

“OnSite Concierge expands the services hotels and airports can offer to travelers,” said Mick Hall, CEO & President of OnSite Media. “Available through this unique bundle with Showcase Technology, more than 20,000 hotels and facilities around the world can now provide their customers with business center services alongside a customized, free 24-hour interactive concierge.”

Under the three-year agreement between the companies, all current NetStop™ software customers will be offered the OnSite Concierge as a free upgrade. In the first week of introduction, Hall noted that “all of the NetStop™ subscribers who were contacted had signed up for the upgrade.” Hoteliers will also have the opportunity to view the new product first-hand at the 2009 Best Western North American Convention in Phoenix, slated for Oct. 21 - 24, 2009.

“The new software package that bundles OnSite Concierge with NetStop™ enhances our capabilities to better serve the needs of our customers, such as hotel and airport business centers,” said Paul Rajewski, CEO of Showcase Technology. “It is also the first time that the OnSite Concierge has been available in Europe and Asia.”
